Profile

Former Junior Buyer and Procurement Intern at Unite Students, with experience supporting sourcing, supplier engagement, tender coordination and Excel-based evaluation. MEng Aerospace Engineering graduate with an analytical approach to comparing information, documenting decisions and coordinating stakeholders. Seeking to apply this combination in procurement and commercial analysis.

Procurement & Analytical Skills

- Tendering: supplier information gathering, RFI/RFP administration, submission collation and structured evaluation documentation.
- Commercial analysis: Excel-based comparative evaluation, lookup functions, pivot tables and procurement data-quality checks.
- Supplier and stakeholder engagement: resolving information gaps, supporting supplier relationships and coordinating progress across activities.
- Processes and systems: Oracle Fusion-related procurement workflows, process documentation and improvements to working practices.

Professional Experience

Junior Buyer — Unite Students

Bristol | June–December 2025

- Supported tender and RFI/RFP workflows by coordinating supplier information, collating responses and maintaining evaluation documentation.
- Built and maintained Excel tools to organise, compare and quality-check procurement information, including lookup functions and pivot tables.
- Worked with suppliers and internal stakeholders to resolve incomplete or inconsistent information and maintain progress across procurement activities.
- Supported supplier relationship management and improvements to procurement documentation; contributed to Oracle Fusion-related workflows and process standardisation.

Procurement Intern — Unite Students

Bristol | Summer 2024, ten weeks

- Supported RFP administration through supplier submission organisation, response collation and information preparation for evaluation.
- Produced and updated Excel tools for procurement data organisation and comparison; checked, reformatted and validated records to improve consistency.
- Communicated with suppliers and internal stakeholders to obtain missing information and provided regular progress updates across tasks and deadlines.

Education & Engineering Analysis

MEng Aerospace Engineering — Merit

University of the West of England, Bristol | October 2021–August 2025

Developed numerical analysis, design trade-off and evidence-evaluation skills through CFD and propulsion projects. Used MATLAB, Excel and engineering calculations; contributed economic analysis and landing-gear design to a university aircraft concept.

Additional Information

Languages: English (fluent); Japanese (elementary). Engineering CV and detailed project evidence are available through the portfolio.
